AI Ethics & Responsible Usage Declaration

I hereby declare that:

- The dataset used in this assignment is properly cited and ethically sourced.
- I have analyzed potential biases present in the dataset and model.
- I have considered privacy implications related to the data used.
- I understand the responsible and ethical usage of the developed system/model.
- This work adheres to institutional guidelines on ethical AI practices.

Dataset Details:

Source: Manually collected and labeled tweet dataset

Type of Data: Text data (tweets for sentiment classification)

Contains Personal/Sensitive Data? (Yes/No): No (public-style/sample tweets used)

If Yes, describe anonymization steps: Any identifiable information (if present) has been avoided or generalized

Identified Bias (if any):

The dataset contains only **100 tweets**, which is relatively small and may introduce:

Sampling bias

Limited representation of diverse opinions

Manual labeling may introduce **human bias** in sentiment classification.

The model may misinterpret:

- Sarcasm
- Slang
- Context-dependent meanings

Efforts have been made to ensure **balanced labeling**, but some bias may still exist.

Responsible Usage Statement:

- 🎓 This sentiment analysis model is developed **only for learning and academic demonstration**.
- 🎓 The predictions may not be fully accurate due to:

- Small dataset size
- Simplicity of models (Naive Bayes, Logistic Regression, SVM)
- 🚫 The model should **not be used for real-world decision-making**, such as:
- Political analysis
- Business sentiment evaluation
- Social profiling
- 🚫 Users must understand the **limitations of NLP models** in interpreting human language.
